The Starting Questions

Question 1: What are your weak points and strong points in group work?
Communication, decision-making, scheduling, conflict resolution, etc...

My weak point is also somewhat a strong point.
I like to do things perfectly, and that is very time-consuming. I prefer to understand things in detail, so time management is an issue. However, since it is group work, there is peer pressure to finish on time. Everyone shares the responsibility to complete their part and, if they get stuck, to work through problems together.

Question 2: What do you hope to learn as a group during the project?
Communication skills, time-management, conflict-resolution skills.

We used GitHub, so I was concerned about merge conflicts. However, since everyone worked on their own tasks, there were no issues. The same applied to Overleaf. We shared ideas on how to approach the work efficiently, so everyone could work in their own environment without depending too much on each other.

Question 3: What do you think the assignment is asking you to do?

This project helped me understand how bias influences outcomes and how humans differ from machines. Humans interpret context in a semantic way, while machines learn in a more structural way. The approaches are different, sometimes even opposite meanings can appear closer than similar ones. In addition, sentences have different structures, including nouns, punctuation. ..Through this, we gained hands-on practice with concepts such as POS tagging and lemmatization, which were discussed during the lectures,

Question 4: What role do you hope to fulfill during the group project?
Leader, communicator, to keep the overview, note-taker, etc...

think we didn't need assigned roles. We communicated the deadlines, when tasks would be completed, and who was responsible for what. If anything changed, we discussed it within t he group. Since it is a small group, communication is easy and we can quickly reach agreement.

Question 5: Which part of the group assignment do you want to take the lead on?
Writing, researching, formatting, etc...

We share responsibility for the project. I am responsible for my assigned tasks, including coding and writing. At the end, we review the entire assignment together to ensure nothing is missing and that everything is clear.

Question 6: What are your goals for the project?
A high grade, a passing grade, to learn something new?

Due to my background in AI, the material was not entirely new, but it served as an opportunity to refresh my understanding of the concepts.

For the course, I like the idea about creating my oen transformer from the scratch.

Question 7: What type of worker are you?
What are your individual strengths and weaknesses? Writing, researching, formatting, etc....

Writing is my weak point because it takes too much time, and I don't enjoy it. I prefer analyzing things. I can report my findings, but expressing them concisely in writing is more challenging.

Question 8: What personal development goal do you have for this group project?
Become a better listener, take the lead more often, etc.....

I like to explain my understanding of a concept out loud, in order to feel that I have really grasped the concept.

Time management.

Question 9 (*Optional*): Give a description of your colour and how you identify with it
For the test, visit our website to find out which colour describes you

One of my pet peeves is when others make decisions on my behalf without consulting me first.
